Agenda for Telephonic Interview

Application No. 10/537,037

Interview scheduled for Thursday, September 2, 2010 at 11:30 am

Participants: Lauren T. Emr (Applicants representative)
Nick de Vetten (co-inventor)
Examiner Robinson
Examiner Grunberg

Introduction:

Dr. de Vetten will explain the invention. In particular, he will explain how it was surprisingly discovered that the *amf*-allele in potatoes increases protein storage of a potato. Prior to the invention, the *amf*-allele was known to produce amylose-free potatoes.

None of the cited documents discloses or suggests that the *amf*-allele increases protein storage in potatoes.

Claim amendments:

Applicants have no claim amendments to offer, but stand willing to amend the claims in order to make the invention more clear if the Examiner's propose a suggested amendment.
